

Simulated Impact of ACS Data on IHBG Funding

AIAN Entities

- \$500,000 or more loss
- \$100,000 to \$500,000 loss
- Net change < \$100,000
- \$100,000 to \$500,000 gain
- \$500,000 or more gain

Regional Generalization (Difference in US \$)

HUD has simulated the funding impact on tribes of changing the data source for the Indian Housing Block Grant (IHBG) formula from aged 2000 Census data to 2010 Census and American Community Survey Data.

This map represents predicted funding changes graphically. All data for this visualization is drawn from HUD ACS simulation version 4. For illustration of regional trends, all valid (not null) values were extrapolated into a surface using ordinary kriging on predicted change in dollars. ArcGIS Desktop was used for the analysis. Color stretch is histogram equalized.
